

For personnel developers & coaches

# repeat mobile

The new mobile learning app

Learning sustainably by repeating the mobile training units

Extending presence trainings. Increasing retentiveness

FOR ALL SYSTEMS

## Increasing knowledge retention & performance

repeatmobile offers you the opportunity to increase the learning success of your participants.

The learning success is mainly measured by the participants' retentiveness. Repeating the learning topic regularly increases the knowledge remarkably.

### The app for every operating system

The app can be downloaded through common mobile app stores (e.g. Apple App Store or Google Play) or via the Enterprise Server of a company. Additionally, it can be downloaded via the browser over a link. The repeatmobile Platform is Multi-Device-enabled and users can get access via PC/Notebook/Tablets/Smartphones. In this way, the user can start on the office PC to learn for instance and finish his training later on the smartphone.

## repeatmobile App

Increase the learning success by repeating continuously the topics of your presence training!

FOR ALL SYSTEMS

1.

2.

## Repeating the topics

1. With the help of our authoring tool, you can not only develop mobile trainings, but also integrate files or videos (for example recordings of your presence trainings). Taking the advantage of digital media, you can spread all of your topics. All in one app - so comfortable and to be managed easily via app on Smartphone / PC / notebook / tablet PC. The app is SCORM-compatible

2. With the help of extremely practice-oriented tests, the participants can apply the knowledge they have acquired in specific area – thus the learning efficiency increases!

It is up to you to decide whether to repeat the tests or not and when the participants are allowed to dispose of them.

## Staying in contact with the trainees

1. Convey individual messages to your class (in the form of texts but also via video messages), use the notification function of the app and stay in contact with your participants by providing trainings and tests regularly. Thus, you increase the knowledge retention and job performance even beyond the training while keeping in touch with your protégés.

2. Via the start page, you can upload your contact data like your telephone number or e-mail address. With messaging function, you can make sure that your participants can reach you in case they have questions regarding the learning topic.

1.

2.

3.

## Managing different courses

3. Through course system, you can comfortably manage different training with different topics and different participants - all in only one app. Furthermore, you can always expand presence trainings with new contents - very simply and comfortably administered from the app via your PC/notebook or tablet.

## Trainee profile page

1. On the profile page of the trainee the completed trainings as well as the gained points are shown so that the course participants see at a glance what they have achieved so far.

## Making success visible

In the Learning Analytics System you can view the learning curve of the participants and, at the same time, access detailed information to depict the learning success. Beside the evaluation you can also see who has gone through the individual training so far.

1.

## Reporting learning successes

Issuing reports for boards and shareholders at the touch of a button

The requirement of provable learning success increases more and more. Boards, supervisory boards or shareholders request a demonstrable benefit of their investments in operational education.

Our mobile learning statistics ensure a higher level of transparency and verifiability of the learning progress. Responsible managers quickly draw the corresponding reports that deliver the required proofs. Finally you can also document the daily learning success – very much to the pleasure of those who decide.

## Message function à la WhatsApp/ WeChat

How you create learning teams  
and connect them with each  
other

Providing learning content in the app after presence trainings and being remembered of that in a smart way is one thing. But another thing is to learn in a team, to keep in touch and to support each other. On the one hand this form of collaboration is quite effective (keyword “Wisdom of the Crowds”). On the other hand it is also interesting and helps to strengthen international teams.

The repeatmobile app offers an internal message service that links the training participants with each other and thus promotes the informal learning even beyond big distances.

## Mobile employer branding

*Attractive learning tools make the difference*

The attractive customization function enables you to present the app in the corresponding Corporate Identity (CI) of the company. In this way learning content as well as the app itself can be attractively branded. Modern forms of animations complete this attractive impression.

The employee receives a valuable learning app that gives him/her the impression of being important to the company with regards to his/her personal development. A CI-branded app with modern functions that are attractive and suitable for the daily routine combined with individual learning content may also represent a market advantage in the company's fight for talents.

## Integrating the learning in the daily routine

Having mobile learning content in your pocket or handbag – available at any time

With our repeatmobile app your operational learning content gets to your employees' smartphones – safe and protected. On average users look about 80 times a day on their mobile screens – a chance to place the learning content in the everyday life of the users.

The repeatmobile app makes memorizing of learning content easy and, at the same time, gives the opportunity to manage it yourself. The learning success comes faster by integrating it in your daily routine. A benefit for all.

## Sales & service training

### Never lose sight of the next order

Yesterday's sales successes are not a guarantee for those of tomorrow. A really good seller has to know his products as well as the sales techniques thoroughly. And things are changing constantly. For both competences it is necessary to train permanently, just like they do in sports, e.g soccer. So what would be better than publishing the sales and service trainings on the smartphone which is constantly at hand?

Our app is suitable for the everyday life as it supports the daily training in order to always retrieve the desired performance when it comes to a sales conversation, for example with smart cheat sheets just before the sales conversation starts.

# (Re)learning Process

## Repeating business process

The business process in a company constantly change, for example due to software changes, new laws or general developments in the organization. Those types of training are usually held in the form of Web-Based-Training (WBT) or one-time blended training. However, the “to do tasks” are not always clear and understandable afterwards.

The re-learning (re-training) of new process thus becomes more and more important. Often it is also about highlighting, a managed focus on important activities, also called prioritizing. Benefit from the advantages of our learning app for your Business Process Management (BPM).

## Learning in the operational spare time

Learning when there is the time.  
Not according to a schedule.

Is this situation familiar to you? The requirements increase but the budgets not at all. The employee shall develop but he/she does not receive more time to do so. Our mobile app enables everybody to learn during the operational spare time in an easy, comfortable and entertaining way. Frequent bite-sized mobile learning is better than learning once a week for an hour at the computer. As experts for developing mobile content we help you to create and deliver mobile trainings.

**repeat mobile**

*helps you to  
individually  
adapt  
your presence  
training.*

## Didactic quality assurance

Didactic quality is becoming more and more important – goals have to be monitored

Gone are the times of the pure learning events. Even blended learning via PC does not always show the desired success. Corporate learning goals need to be assessed by the trainer/instructor with our repeatmobile app.

We have invented completely new methods to check and track the didactic quality. Upon request we are please to provide you anonymous or visible tracking.

## Your advantages

- ✓ Following up your presence trainings sustainably, easily and comfortably
- ✓ Increasing retentiveness by trainings & tests
- ✓ Integrating the learning in the everyday life of the employees
- ✓ Remind of learning using configurable notifications
- ✓ Anonymous tracking creates trust among the users
- ✓ Message and feedback functions support the learning
- ✓ Didactic quality assurance and transparency
